Build Your Empire with Converge

Accept payments in any location, over the phone, by mail, online, or on-the-go. Converge is a payment platform that enables you to grow your business the way you want. It was built to be truly flexible so you can add or remove services as needed. For example, you might want to add terminals and printers as your business grows. Or you can start accepting payments on your computer, laptop, or tablet with our Virtual Terminal.

Converge is an integrated solution – which means you can access all of your devices at every one of your locations from one login account. Once you login, you can manage all aspects of your business's revenue with one beautiful, easy-to-use dashboard.

LET'S TALK:

Add payments to your existing website or use one of our trusted partners to build your own

E-commerce

In-store

With several options for in-store POS, all you need is power and an internet connection to get started

Allow customers to place orders via phone or mail

Mail & Phone

Mobile

Use our app Converge Mobile to accept payments anywhere

Security with Benefits

Converge is a fully encrypted solution with add-ons that can help you manage your customer's card data with ease. Every payment made on the Converge platform is encrypted at entry, encrypted in transit, and encrypted at rest. Cards stored in our Customer Manager feature are automatically tokenized so all you see are the last four-digits.

You can add tokenization to your account if you deal in a lot of high-volume transactions. If your business is mostly handled in your store or office, you can elect to add Safe-T™ for SMB to your account. Our Safe-T for SMB program includes useful tools such as a pre-filled Self-Assessment Questionnaire (SAQ) and a financial reimbursement program to protect your business in the event of a data breach.

Never Miss a Sale with Converge Mobile

Bring the checkout counter to your customer, wherever they are. With Converge Mobile, you have the perfect sidekick ready to go wherever your staff needs to be. Accept payment on delivery or use it as a backup in your store during peak times.

Converge Mobile is also a great option for businesses who need to prepare for the unexpected. Don't let a power outage or slow internet bring your business to a halt. With Converge Mobile, as long as your mobile device is charged and has data access, you can continue to process transactions as normal.

Set up is simple – all you need is a compatible Android or iOS device and our free Converge Mobile app. We offer optional encrypted card readers and mobile printers to help make each sale seamless. Or, if you prefer, you can enter card data directly into the app. No payment data is stored in the app or on the card reader so if either device is lost, broken, or stolen, your customer's card information is safe.
